

Investment Objective

The Conservative model aims to provide a combination of long term capital growth and an income for investors who are willing to accept a low to medium level of risk by investing across global markets into a range of asset classes. Equity exposure within this portfolio will not exceed 40%. The portfolio's benchmark is the ARC Sterling Cautious PCI.

Commentary

Over the month, the Conservative portfolio returned -0.45%, outperforming the ARC Sterling Cautious PCI. September proved to be a more challenging month for global stockmarkets as most major indices fell and saw volatility increase again as the ongoing Covid concerns, rising inflation, higher energy prices and the Evergrande crisis in China all worried investors. The MSCI World Index fell nearly 4%, with the US and the growth focused technology sectors being the hardest hit. The main UK index fared much better, losing only 0.5%, as it was a beneficiary of the higher oil prices and with the index having a more value bias. Japan though was the only major market to post a positive return, as the equity market rallied strongly following the announcement that Prime Minister Suga was to step down as party leader. In fixed income, government bond yields moved higher, with the UK ten-year gilt hitting 1%, as both the Bank of England and the US Federal reserve hinted that interest rates may rise sooner than previously thought in order to combat inflationary concerns. We find the portfolio remains suitable for a client looking to obtain a broad exposure of assets diversified by manager, investment style, geography and income.

Performance Summary as at 30 September 2021

	1 MONTH	3 MONTHS	6 MONTHS	1 YEAR	3 YEARS	5 YEARS	SINCE INCEPTION DATE
Conservative Model	-0.45%	1.32%	3.91%	8.17%	10.87%	18.84%	72.85%
ARC Sterling Cautious PCI	-1.40%	-0.22%	2.21%	5.69%	10.94%	16.70%	47.16%

A central model is created for each of our model portfolios, where the performance summary, asset allocation, fund holdings, charges and yield quoted on this factsheet are based on the central model portfolio. Where the central model is replicated, such as through a platform, any individual portfolio is unlikely to be identical to that of the central model as a result of the timing of the investment or any restrictions of the platform provider. There may be some circumstances when certain investments (e.g. property funds) may not be readily realisable and investors may experience difficulty in selling the investment or in obtaining reliable information as to its value.
